SLIP
ADDITIVES

SLIP ADDITIVES

Our Slip Agents promote slip and leveling in coatings and inks. In the production process, the film surface should be smooth to offer good mar resistance and improve anti-block resistance.

Primarily, JebChem Slip Additives are silicone-based products that promote the reduction of surface tension and improve anti-crater properties.

PRODUCT RANGE – SLIP ADDITIVES

Product Name	Features
JebChem 3054	Good slip and levelling for pigmented systems. Provides defoaming property with low foam stabilisation.
JebChem 3057	Excellent substrate wetting, good levelling, slip and anti-crater properties.
JebChem 3061	Specially designed for solvent-based paints and can provide hammer-tone effect.
JebChem 3210	Silicone acrylic UV cross-linkable with UV resins. Excellent compatibility with most UV resins.
JebChem 3235	Excellent anti-Crater additive with good flow levelling. Helps orientation of matting agents.
JebChem 3306	Universal flow, levelling and slip additive. Good compatibility with many paint systems.
JebChem 3307	Suitable for all paint systems with good compatibility and good levelling for water-based and solvent-based systems.
JebChem 3323	Excellent levelling with defoaming property, suitable for baking systems. Helps orientation of matting agents.
JebChem 3331	Good compatibility with water-based and solvent-based paints with good levelling.
JebChem 3333	Universal flow, levelling and slip additive. Good compatibility with many paint systems.
JebChem 3370	Good compatibility with solvent-based paints. With OH groups in the structure that can react with isocynate or melamine to provide anti-graffiti coatings.
JebChem 3378	Universal with good compatibility and excellent slip.
JebChem 3410	Good compatibility with solvent-based paints. With excellent slip with high surface tension reduction.
JebChem 3450	Good compatibility with solvent-based paints. With excellent slip with high surface tension reduction.
JebChem 3484	Specially designed for epoxy systems and epoxy flooring coating with good levelling, slight defoaming and low foam stabilisation.
JebChem 3500	Good compatibility with solvent-based paints. With OH groups in the structure that can react with isocynate or melamine to provide anti-graffiti coatings.
JebChem 3510	A polyether modified polydimethylsiloxane that is designed for UV radiation curing for UV overprint varnishes.
JebChem 3511	Specially designed for water-based systems to provide excellent slip and anti-block properties.
JebChem 3700	Excellent anti-block and anti-graffiti properties. For UV systems.
JebChem 3900	Excellent anti-block and anti-graffiti properties. For UV systems.

FUNCTIONAL OVERVIEW - SLIP ADDITIVES

Product Name		System			Paint						Functions								
		Solvent Base	Water Base	UV Curing	Architecture	Automotive	Coil/Baking	Heavy Duty	Pigment Paste	Plastics/Industrial	UPC/FRP	UV Curing	Wood	Anti-Crater	Defoaming	Flow & Levelling	Slip & Anti-Blocking	Low Foaming	Low Slip
